Notes

The cable must be securely laid and protected against mechanical damage.

According to DIN EN 60079-0 the switch must be protected against impact when it is used in explosive areas.

If the connection is also realized in a hazardous location use a box for this which complies with an acknowledged type of protection according to DIN EN 60079-0.

The safety level of the gap is higher than in the standard DIN EN 60079-1 required security level.

The switch is to establish protected from UV light.

The switch may not be used as a mechanical stop.

The indicated data refer to an operation in direction of the plunger.

Other cable lengths on request.
