## Actuation

Turning the cap (pos $A / B$ ) allows 4 different directions of drive.
Cover (1) has to be opened before turning the cap (2).
Insert the screwdriver into the gap between housing and cap and
turn until the cap snaps off.
Remove the cap, turn it $180^{\circ}(4)$, latch it into the housing and close the cover.

## Notes

The degree of protection (IP code) specified applies solely to a property closed cover and the use of an equivalent cable gland with adequate cable.
The switch may not be used as a mechanical stop.
Radial actuation may reduce the mechanical life.
The min. radius refers to a pivot at the top of the cap $\left(\mathrm{S}_{0}\right)$.
Tapped holes not in use must be closed with blind plugs.
