

# Altech Metal Detectors

## *Separate* from the rest.

COMPETITIVELY PRICED • LARGE VARIETY • CUSTOM SOLUTIONS

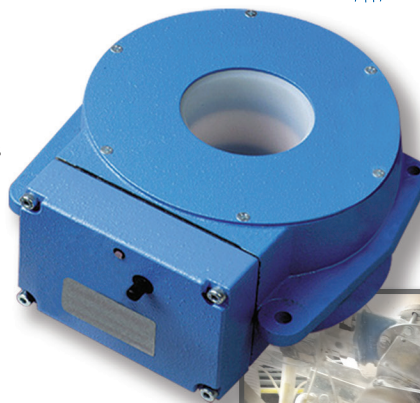

### Tunnel Sensors

High Sensitivity  
Custom Sizes  
Various Control Options

Altech carries a large line of Metal Detection Devices. **Flat Sensors** are for all types of metals mostly used in conveyor belts. They are used to inspect bulk material and finished goods as well. The FS series doesn't only allow metal objects to be detected, but also to localize their position. **Tunnel Detectors** are used where high sensitivity and reliability are requested. For operation the end user can choose between several control units to operate the tunnel detectors. **Ring Sensors** can be used in metal separating systems, as counting device, ejection control in stamping applications, wire breakage monitoring or for detecting metal objects. Various diameters are available with static and dynamic sensing technology for standard, high and ultra high sensitivity.

### Flat Pack Sensors

High Sensitivity  
Metal Detection & Localization  
Custom Dimensions and Solutions

### Ring Sensors

Various Sizes  
Various Diameters  
High Sensitivity  
Ultra High Sensitivity

2 - 300 mm Ring Sensors  
in grain facility application
